Memory-mapped prediction input and reusable result buffers

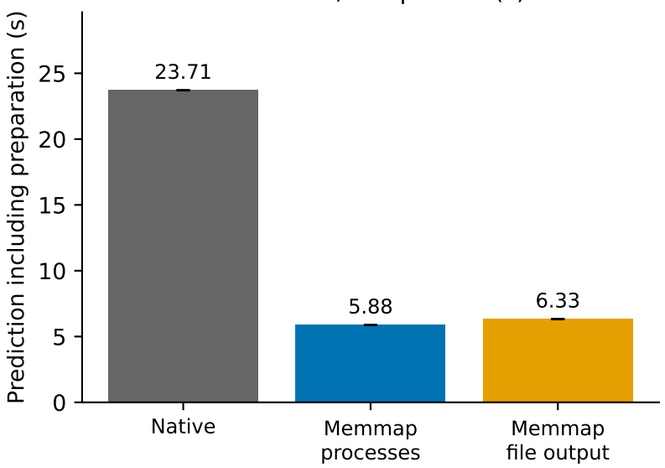
3M rows, 50 ensembles
Separate ensemble output
4 workers; 1 repetition(s)

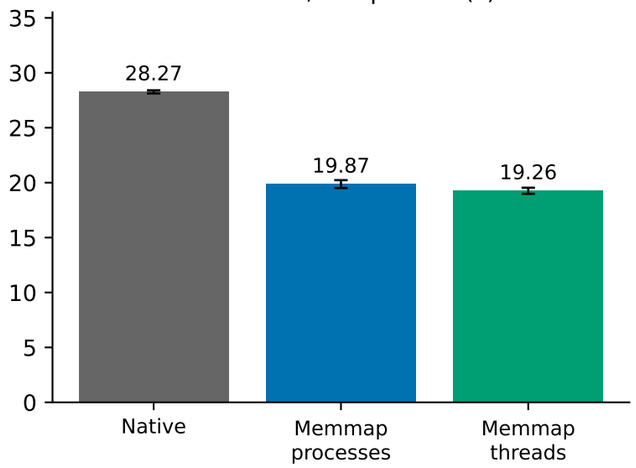
1M rows, 50 ensembles
Tuned XGBoost + local beta
4 workers; 2 repetition(s)

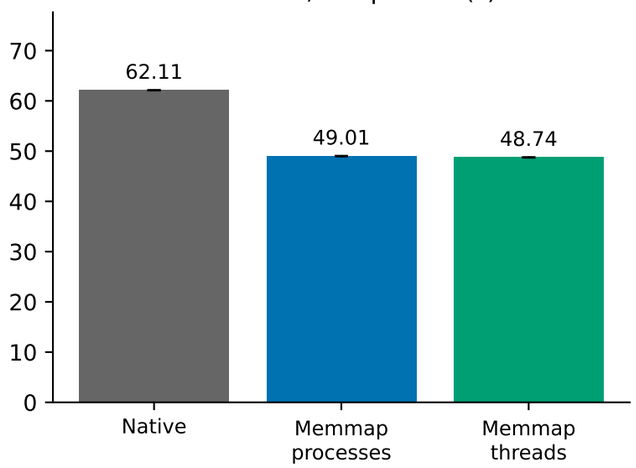
1M rows, 20 ensembles
458 MiB fitted forests
4 workers; 1 repetition(s)

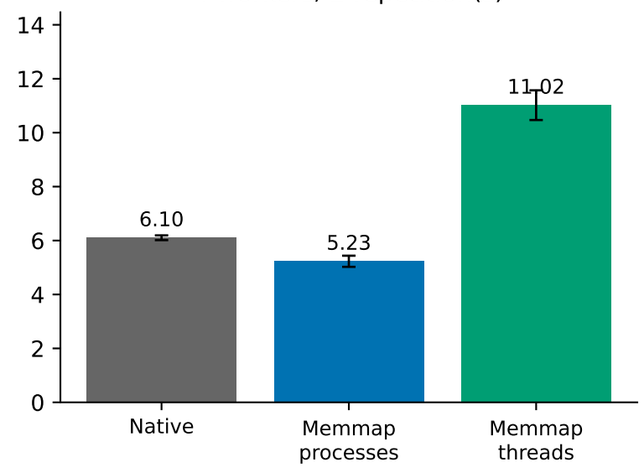
300k rows, 12 ensembles
6,796 fitted stixels
4 workers; 2 repetition(s)

Prediction including preparation (s)

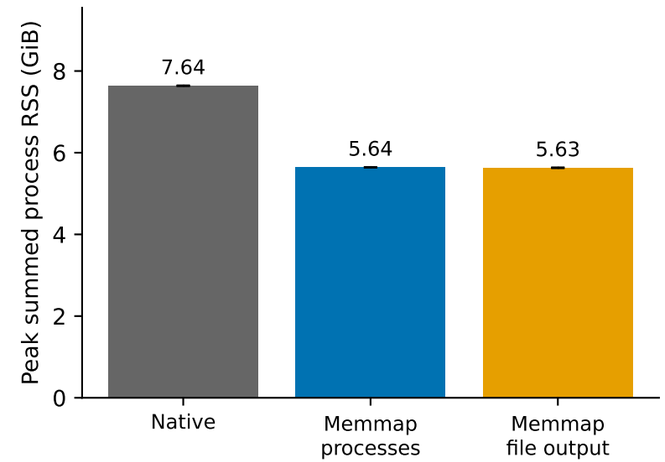


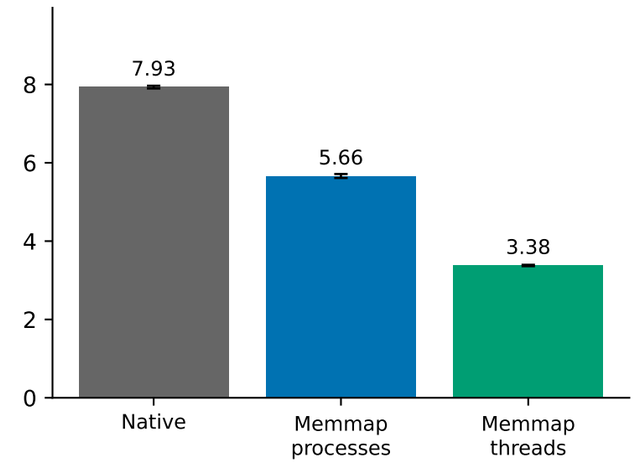


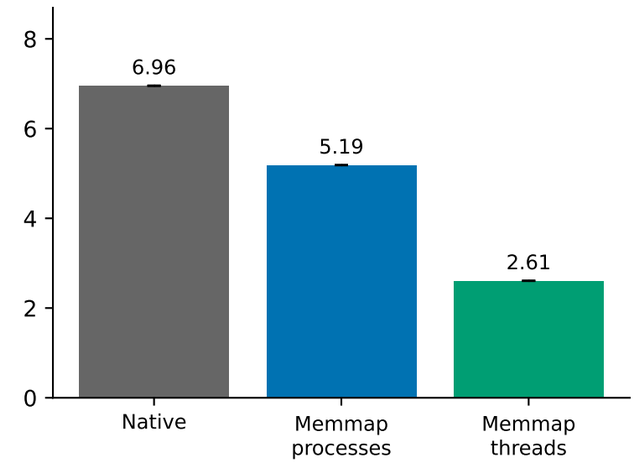


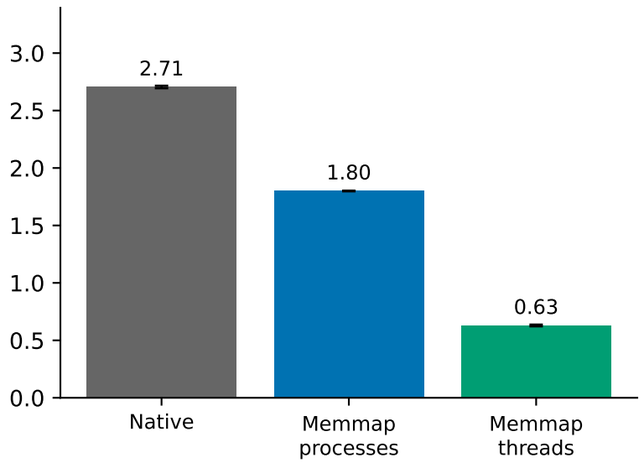


Peak summed process RSS (GiB)

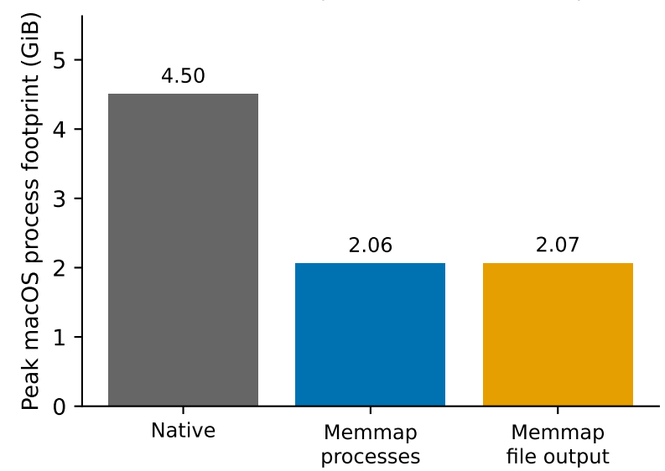


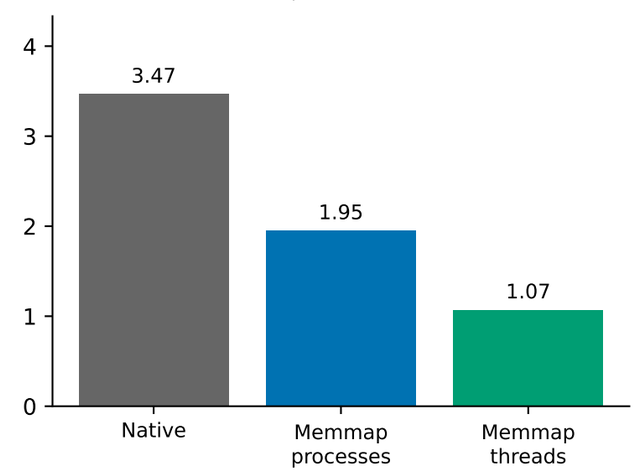


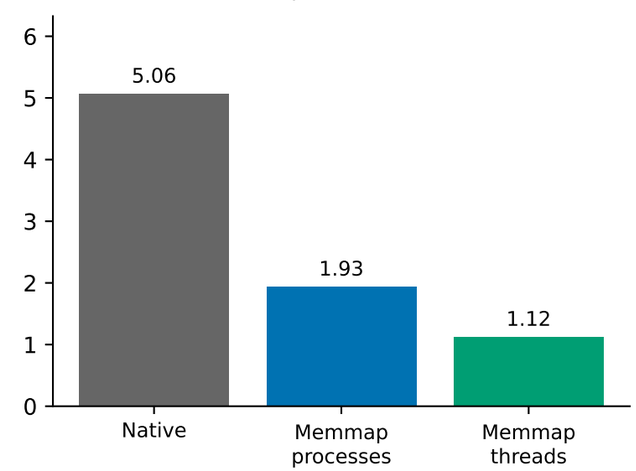


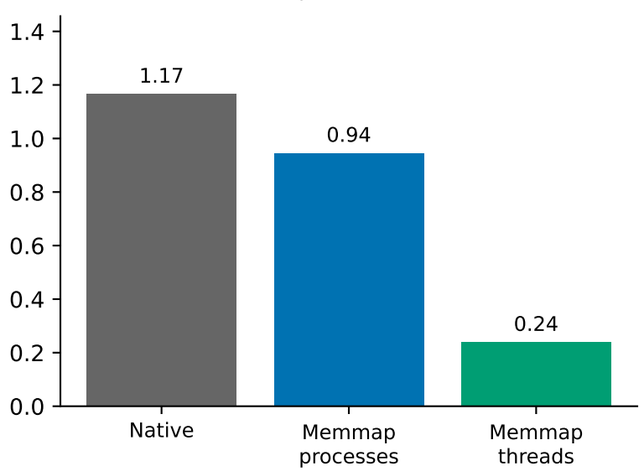


Peak macOS process footprint (GiB)









Bars are medians; whiskers show observed min–max, not confidence intervals. RSS counts shared pages repeatedly. Footprint excludes much file cache.
These Apple Silicon measurements are not Slurm/cgroup memory charges.
